Summary

Backend-focused Software Engineer with 1.9 years of experience designing, developing, and optimizing scalable RESTful APIs and full-stack web applications. Skilled in Node.js, Express.js, FastAPI, and relational/NoSQL databases (PostgreSQL, MySQL, MongoDB). Strong analytical and debugging skills with experience in Agile delivery, system integrations, and cross-functional collaboration. Eager to learn new technologies and contribute to secure, high-performing production systems.

Skills

Programming Languages: JavaScript, Python, TypeScript
Backend & API Development: Node.js, Express.js, REST API Design & Development, FastAPI, Microservices Fundamentals
Frontend Technologies: HTML, CSS, ReactJS
Database Management: MySQL, MongoDB, PostgreSQL, Mongoose, Prisma ORM, Relational Database Concepts
Authentication & Security: JWT, bcrypt, Token-based Authentication, Role-based Access Control (RBAC)
Development & Collaboration Tools: Git, GitHub, Postman, Swagger, VS Code, Azure, Supabase, Agile Methodology, GitHub Copilot
Core Concepts: Object Oriented Programming, Multi-tenant Architecture, Middleware, Data Validation, System Integrations, Version Control
AI/ML Concepts: LLM Integration, Vector Embeddings, Semantic Search, Hugging Face API

Experience

Software Development Engineer (SDE-1) Oct 2023 – Jul 2025
Jio Platforms Limited, Navi Mumbai, India

- Designed and developed more than 15 scalable RESTful APIs using Node.js and Express.js, enabling critical product features in production environments and ensuring reliable backend functionality.
- Optimized complex database queries and backend logic across MySQL and MongoDB achieving a 30% reduction in API response times and significantly improving overall system performance, scalability, and reliability.
- Identified, analyzed, and resolved multiple production and pre-production bugs through systematic debugging and root-cause analysis, reducing runtime errors by 25% and enhancing long-term service stability and user experience.
- Collaborated closely with cross-functional front-end and product teams in Agile sprints to deliver seamless API integrations and system-to-system connections, ensuring timely feature releases and smooth product delivery pipelines.
- Maintained high standards of code quality by conducting peer reviews, authoring detailed technical documentation, and applying version control practices alongside Postman/Swagger testing, resulting in secure, maintainable, and well-documented codebases.

Projects

DeskWerk github.com/pmayur02/DeskWerk
Node.js, Express.js, MongoDB, LLM, Hugging Face API

- Developed a multi-tenant ticketing system that enables companies to securely manage employees and support tickets using REST APIs, RBAC, and JWT authentication.
- Integrated Meta LLaMA through the Hugging Face API to provide AI-powered ticket resolution suggestions and improve support efficiency.
- Implemented semantic search using Sentence Transformers and RAG to retrieve similar historical tickets and provide relevant resolution suggestions.
- Built smart ticket assignment with department-based routing, agent/resolver fallback logic, and data validation to improve system reliability and user experience.

AI-Powered Resume Screening & Ranking System github.com/pmayur02/ResumeScreeningAgent
Python, FastAPI, MySQL, LLM API

- Built an AI agent that scores resumes against job requirements across multiple dimensions and returns explainable, structured reasoning for each decision.
- Designed a MySQL schema and REST API to store jobs, resumes, and AI-generated evaluations.
- Added PDF resume ingestion (text extraction) and integrated OpenRouter to support swappable LLM backends.

Education

Bachelor of Engineering in Computer Engineering 2019 – 2023
RMD Sinhgad School Of Engineering, Pune, India

Certifications

Google Prompting Essentials June 2026
Coursera, Google
Introduction to AI June 2026
Coursera, Google
